

Women in the San Antonio Economy

Study Conducted by:

Belinda Román, Ph.D. and Steve Nivin, Ph.D.

Presented to:

9th Annual “Making a Mark on the World” Women’s Award Luncheon

San Antonio Hispanic Chamber of Commerce

May 30, 2018

Gross Domestic Product (GDP)

- The market value of all final goods and services produced in an economy in a year.
 - Income generated by productive activities.
- Created by Simon Kuznets in 1930s and adopted in 1940s
- Used as key measure of size and growth of economy and became a post-WWII measure of general standard-of-living
- However, Simon Kuznets cautioned:
 - "The welfare of a nation can scarcely be inferred from a measure of national income."

What GDP does not include

- Non-market activities
 - Goods and services provided by households or businesses that are not part of a market transaction
 - Preparing meals at home
 - Yard work done by household members
 - House cleaning done by household members
 - Preparation of meals at home
 - Child care provided by parents
 - Adult care provided by family members
- Impact of gender wage gap and Pink Tax
- Externalities (e.g., costs of pollution)

GDP Measures and Adjustments

- Ways to estimate GDP
 - $Y = C + I + G + (X - M)$
 - Value-added by industry
 - Income earned by resources
- Generally speaking, (market) GDP = (market) Income
- 2013 UK study valued unpaid housework at £1 trillion, 56% of measured 2014 GDP of £ 1.8 (Office for National Statistics, 2016, 3).
- Finland estimates unpaid housework as contributing some 40 percent to total economic activity (Pilling, 2018, 57).
- Latest Non-market estimates for U.S. GDP by U.S. Bureau of Economic Analysis suggest 23.0% in 2014 (Bridgman, 2016)

Focus of our study

- GDP by metropolitan area is the metropolitan area counterpart of the nation's.
- How to adjust San Antonio's GDP to include non-market household production and impact of equalization of wages?
 - Measure Household production
 - Wage gap between men and women
- Understanding what GDP would be with these adjustments is important for understanding the economy and formulating appropriate policy.

Our considerations

- Most recent Census Data show that:
 - The wage gap between men and women in the U.S. is 82%
 - But in San Antonio it is 84%
- Research on Household production:
 - Women spend twice as much time on household chores
 - Up to four times as much time on in the home care.
- Female Labor Force Participation rate:
 - U.S. is 56.7%
 - For San Antonio, 58.5% but 54% are employed.
 - Women tend to use more of their earned income to support their children than men

Our Results

Value of GDP in the San Antonio MSA Adjusted for Household Production and Equal Pay in 2016	
Measured GDP	\$109,348,000,000
Value of Household Production	\$20,762,798,086
Value of Equal Pay	\$19,026,552,000
Total Adjusted GDP	\$149,137,350,086

Other aspects - Women in the Economy

- Most undervalued asset in the economy (S&P Global 2017)
- Equalizing pay would improve San Antonio GDP by 19%
- Adding in Household production would add about the same
- Pink Taxes – Bureau of Labor Statistics price indices show that women and girls pay more than men and boys for certain items.
- Income tax policies place higher burden on women earners in 2 income households

Other aspects - Women in the Economy

- San Antonio ranks #2 in economic clout of its Women-owned business (AmEx 2017 report)
- Ranks #1 in employment and vitality of its Women-owned business (AmEx 2017 report)
- But the majority remain small and lack access to resources

Women in the San Antonio Economy

- Number of opportunities to grow the overall MSA economy
- Specific issues important to women such as childcare, wages, entrepreneurial resources can help women join in the economy
- We are a leader in women-owned businesses
- Still have room for improvement

Thank you.
